The Background

McGoff Construction is a UK based, privately owned, multi award winning construction and integrated support services business. McGoff chose Perfect Sense Energy to install a 92.95 kWp Solar PV System onto their newly operated care home, to reduce their green credentials and energy spend on grid power.

McGOFF
CONSTRUCTION

The Solution

State of the art, tier 1 solar panels were installed onto the care homes roof and are estimated to save around 80,385 kWh of clean renewable energy. In addition, over 48,000 Kg of CO₂ emissions will be avoided.

The Results and Feedback

McGoff now has a high quality Solar PV system making significant savings on their energy bills and protecting them from rising energy costs. The system generates clean energy, providing free power into the site as well as reducing their carbon footprint.
