The Background

Trimline are a 3rd generation family business that specify and supply tiling systems on residential and commercial projects across the UK. Perfect Sense Energy were looking to install a 249.8 kW Solar PV System on top of their roof to help reduce their carbon footprint and energy spend.

The Solution

The system is estimated to generate around 240,000 kWh of clean free energy per annum and will save 84 tonnes of Co2 in the first year. The system will save around £1.3million in its lifetime which will be a 782% ROI.

The Results and Feedback

The system had helped Trimline protect themselves from rising energy costs and reduce their carbon footprint. It was also fantastic to see Trimline supporting our NHS with a rooftop message, alongside their Solar PV installation!
